Senior Software, Data, & AI Executive | Building AI-Augmented Data Organizations

EXECUTIVE SUMMARY

Senior data and AI executive who builds AI-augmented data organizations. Deployed seven production pipeline agents on AWS Strands Agents SDK, shifting a data team from manual producers to agent-augmented reviewers. Built a six-layer enterprise data platform with semantic layer governance and metric certification across one of the nation's largest urgent care datasets. Led from the front, personally built agents across Strands, LangGraph, CrewAI, and OpenAI Agents SDK to drive architecture selection and team upskilling. Delivered $125M in post-M&A cost reductions contributed to a $500M to a $1.2B valuation increase. Built a product research analytics practice the CEO called the highest-value function delivered internally. MBA in Advanced Business Strategy Using AI and Analytics.

PROFESSIONAL EXPERIENCE

Sr. Director of Data Strategy, Analytics, and AI | *Experity* — 2022 – Present

Building the AI-Augmented Data Organization

- Deployed seven domain-specialized pipeline agents to production on AWS Bedrock AgentCore with MCP tool integration. Piloted on low-risk domains, then expanded across the pipeline.
- Shifted the team's operating model from manual producers to agent-augmented reviewers. Engineers now review and merge agent-generated dbt models, metric definitions, and tests via pull requests.
- Built an industry-agnostic source onboarding framework using agent-generated specialists with human-in-the-loop quality gates. Designed to future-proof M&A integration for any new data source or domain.
- Led from the front: personally built and evaluated production agents across Strands SDK, LangGraph, CrewAI, and OpenAI Agents SDK. Framework evaluations directly drove enterprise architecture decisions.
- Ran organizational change management for the AI transition. Established no-auto-merge guardrails, review quality standards, and preserved hands-on engineering for skill-building.

Enterprise Data Platform & Pipeline Delivery

- Built a six-layer enterprise data platform on Snowflake unifying EMR/PM, Salesforce, and NetSuite data. Delivered via strangler pattern, infrastructure up in one-month, certified metrics delivered iteratively.
- Shipped the Gold Model, canonical Kimball star schema with cross-system entity resolution, CDC pipelines (Kafka, Schema Registry, Debezium), and ingestion contracts enforcing schema validation at the boundary.
- Deployed dbt MetricFlow semantic layer through CI/CD into Snowflake semantic views. Eliminated per-dashboard metric rebuilding that consumed 30–40% of analyst capacity.
- Reduced pipeline incidents from multi-week outages to same-day resolution through ingestion contracts and upstream change protocols negotiated with Product Engineering.

Product Analytics, Business Impact & Executive Leadership

- Built and led a team of 10+. Inherited a foundation team, recruited key hires in engineering and analytics, restructured roles to align with platform layer ownership.
- Built a product research analytics practice delivering segmentation and operational insights. The CEO identified this as the highest-value function delivered internally.
- Launched the practice with the AI Scribe value analysis: 12.4 minutes saved per visit, $1.1M monthly impact. Directly shaped product pricing and go-to-market positioning.

- Extended to subsequent products including Care Agent (patient-facing LLM for lab results), delivering adoption analysis and correlation studies tying feature usage to revenue outcomes.
- Presented data monetization strategy directly to the CEO. Secured executive alignment on treating the data platform as enterprise infrastructure, not a reporting initiative.
- Cut metric delivery time from weeks to 2–5 days on established domains. The platform expands continuously based on prioritized needs, an ongoing capability, not a fixed project.

Culture, Governance & Strategic Judgment

- Shifted analytics from a dashboard factory to a metric-certified operation. Analysts now own metric definitions and certify KPIs reused across every downstream consumer.
- Partnered with Product Engineering to implement upstream change notification protocols. Ingestion contracts catch breaking changes at the boundary, one fix corrects every consumer.
- Aligned Finance, Product, and Operations leadership on certified metric definitions through formal workshops. Eliminated conflicting KPIs in executive meetings.
- Stood up a cross-functional Analytics Board (Product, Finance, Operations, Client Success). Every data request now maps to a platform layer and named consumer before acceptance.

Director of Software Development | *Experity* Jun 2016 – 2022

Technology Transformation & M&A Integration

- Migrated legacy monolith to microservices on AWS (EKS, EC2, Lambda). Eliminated $12M in annual maintenance costs.
- Led post-M&A platform integration: $125M in cost reductions, $500M into a $1.2B valuation increase in two years. Full feature parity across merged platforms.
- Improved agile delivery: 30% productivity increase, 20% faster time-to-market, contributing to $150M in additional annual revenue.

Talent & Leadership

- Built development frameworks improving team productivity by 20% and driving retention.
- Created leadership programs accelerating succession planning and building a cross-functional talent pipeline.

Manager of Software Engineering | *Fatwallet* Mar 2015 – Jun 2016

- Optimized UI with UX/UI team: 15% fewer clicks, $5M in additional annual revenue.
- Led performance optimization: 40% faster load times, 20% higher user engagement.

Manager of Software Engineering | *Supplycore* Aug 2012 – Feb 2015

- Deployed custom ERP solutions: 20% efficiency gain, $2.5M in annual client savings.
- Built real-time analytics reporting: 30% higher customer satisfaction, $10M in additional revenue.

MILITARY SERVICE

Intelligence Analyst Officer | *U.S. Army* Nov 2005 – Dec 2013

- Led strategic intelligence analytics during a 13-month Iraq deployment. Delivered data-driven briefings to General officers informing operational decisions.
- Directed cross-functional intelligence teams integrating multi-source analysis with international partners.

AGENTIC AI — PRACTITIONER DEPTH

Enterprise agent architecture decisions were informed by hands-on practitioner work across multiple frameworks.

- **AI Lab:** Local platform orchestrating Ollama, vLLM, and Qdrant with three production agents (Research, Email, Knowledge) across LangGraph and Strands SDK. Task-based model routing, FastAPI dashboard, and framework benchmarking experiments that drove enterprise Strands selection.
- **Resource Guide:** Authored 85+ resource guide on agentic architecture, foundational research (ReAct, CoT, Tree of Thoughts), and evaluation methodology. Adopted as the team's onboarding standard for the agent-augmented transition.

EDUCATION

Master of Business Administration (MBA) — *Milwaukee School of Engineering*
Delta Mu Delta International Honor Society in Business, Pi Pi Chapter

Certificate, Advanced Business Strategy Using AI and Analytics — *Milwaukee School of Engineering*

B.S., Computer Science (Software Engineering, Architecture, Security) — *University of Illinois Springfield*

CORE COMPETENCIES

AI-Augmented Leadership:

- Agent-Augmented Operating Models
- Agentic AI Architecture & Deployment
- AI/ML Pipeline Design & MLOps
- Organizational AI Transformation
- Enterprise Data Platform Strategy
- Product Research Analytics
- Data Monetization
- M&A Data Integration
- Executive & CEO Stakeholder Management

Technical:

- Strands Agents SDK & Bedrock AgentCore
- LangChain/LangGraph · CrewAI
- OpenAI Agents SDK
- MCP
- RAG & Vector Search (Qdrant)
- Snowflake & Semantic Views
- dbt & MetricFlow
- Kafka, Schema Registry & CDC
- Medallion Architecture & Kimball Modeling
- Python, SQL, Node.js, .Net
- AWS (EKS, Lambda, Bedrock)
- Tableau

Domain:

- Healthcare SaaS
- EMR/EHR & Revenue Cycle Management
- HIPAA-Compliant Analytics
- Semantic Layer Architecture
- Metric Certification & Governance
- Multi-Agent Orchestration
- Data-as-a-Product
- AI/LLM Product Analytics
