Senior Software, Data, & AI Executive | Building AI-Augmented Enterprise Organizations

EXECUTIVE SUMMARY

Senior technology executive spanning software engineering, data & analytics engineering, and applied AI who builds AI-augmented organizations and data-driven cultures. Progressed from leading software engineering through enterprise data platform architecture to pioneering agentic AI, carrying hands-on depth across all three. Built and led a data & analytics engineering organization through an operating model transformation, deploying seven production agents that shifted the team from manual producers to agent-augmented reviewers. Drove data-driven decision-making adoption across executive leadership, embedding analytics into how the business set strategy and measured performance. Architected a six-layer enterprise data platform with semantic governance across one of the nation's largest urgent care datasets. Led the software integration strategy behind $125M in post-M&A cost reductions, contributing to a $500M→$1.2B valuation increase. Built a product analytics practice the CEO called the highest-value function delivered internally. MBA in Advanced Business Strategy Using AI and Analytics.

PROFESSIONAL EXPERIENCE

Sr. Director of Data Strategy, Analytics, and AI | *Experity* — 2022 – Present

Building the AI-Augmented Engineering & Data Organization

- Deployed seven domain-specialized pipeline agents to production on AWS Bedrock AgentCore with MCP tool integration. Piloted on low-risk domains, then expanded across the pipeline.
- Shifted the team's operating model from manual producers to agent-augmented reviewers. Engineers now review and merge agent-generated dbt models, metric definitions, and tests via pull requests.
- Built an industry-agnostic source onboarding framework using agent-generated specialists with human-in-the-loop quality gates. Designed to future-proof M&A integration for any new data source or domain.
- Led from the front: personally built and evaluated production agents across Strands SDK, LangGraph, CrewAI, and OpenAI Agents SDK. Framework evaluations directly drove enterprise architecture decisions.
- Ran organizational change management for the AI transition. Established no-auto-merge guardrails, reviewed quality standards, and preserved hands-on engineering for skill-building.

Enterprise Platform Engineering & Data Pipeline Delivery

- Built a six-layer enterprise data platform on Snowflake unifying EMR/PM, Salesforce, and NetSuite data. Delivered via strangler pattern, infrastructure up in one-month, certified metrics delivered iteratively.
- Shipped the Gold Model, canonical Kimball star schema with cross-system entity resolution, CDC pipelines (Kafka, Schema Registry, Debezium), and ingestion contracts enforcing schema validation at the boundary.
- Deployed dbt MetricFlow semantic layer through CI/CD into Snowflake semantic views. Eliminated per-dashboard metric rebuilding that consumed 30–40% of analyst capacity.
- Reduced pipeline incidents from multi-week outages to same-day resolution through ingestion contracts and upstream change protocols negotiated with Product Engineering.

Product Analytics, Business Impact & Executive Leadership

- Built and led a team of 10+. Inherited a foundation team, recruited key hires in engineering and analytics, restructured roles to align with platform layer ownership.
- Built a product research analytics practice delivering segmentation and operational insights. The CEO identified this as the highest-value function delivered internally.

- Launched the practice with the AI Scribe value analysis: 12.4 minutes saved per visit, $1.1M monthly impact. Directly shaped product pricing and go-to-market positioning.
- Extended to subsequent products including Care Agent (patient-facing LLM for lab results), delivering adoption analysis and correlation studies tying feature usage to revenue outcomes.
- Presented data monetization strategy directly to the CEO. Secured executive alignment on treating the data platform as enterprise infrastructure, not a reporting initiative.
- Cut metric delivery time from weeks to 2–5 days on established domains. The platform expands continuously based on prioritized needs, an ongoing capability, not a fixed project.

Culture, Governance & Strategic Judgment

- Shifted analytics from a dashboard factory to a metric-certified operation. Analysts now own metric definitions and certify KPIs reused across every downstream consumer.
- Partnered with Product Engineering to implement upstream change notification protocols. Ingestion contracts catch breaking changes at the boundary; one fix corrects every consumer.
- Aligned Finance, Product, and Operations leadership on certified metric definitions through formal workshops. Eliminated conflicting KPIs in executive meetings.
- Stood up a cross-functional Analytics Board (Product, Finance, Operations, Client Success). Every data request now maps to a platform layer and named consumer before acceptance.

Director of Software Development | *Experity* Jun 2016 – 2022

Technology Transformation & M&A Integration

- Migrated legacy monolith to microservices on AWS (EKS, EC2, Lambda). Eliminated $12M in annual maintenance costs.
- Led post-M&A platform integration: $125M in cost reductions, $500M into a $1.2B valuation increase in two years. Full feature parity across merged platforms.
- Improved agile delivery: 30% productivity increase, 20% faster time-to-market, contributing to $150M in additional annual revenue.

Talent & Leadership

- Built development frameworks improving team productivity by 20% and driving retention.
- Created leadership programs accelerating succession planning and building a cross-functional talent pipeline.

Manager of Software Engineering | *Fatwallet* Mar 2015 – Jun 2016

- Optimized UI with UX/UI team: 15% fewer clicks, $5M in additional annual revenue.
- Led performance optimization: 40% faster load times, 20% higher user engagement.

Manager of Software Engineering | *Supplycore* Aug 2012 – Feb 2015

- Deployed custom ERP solutions: 20% efficiency gain, $2.5M in annual client savings.
- Built real-time analytics reporting: 30% higher customer satisfaction, $10M in additional revenue.

MILITARY SERVICE

Intelligence Analyst Officer | *U.S. Army* Nov 2005 – Dec 2013

- Led strategic intelligence analytics during a 13-month Iraq deployment. Delivered data-driven briefings to General officers informing operational decisions.
- Directed cross-functional intelligence teams integrating multi-source analysis with international partners.

AGENTIC AI — PRACTITIONER DEPTH

Enterprise agent architecture decisions were informed by hands-on practitioner work across multiple frameworks.

- **AI Lab:** Local platform orchestrating Ollama, vLLM, and Qdrant with three production agents (Research, Email, Knowledge) across LangGraph and Strands SDK. Task-based model routing, FastAPI dashboard, and framework benchmarking experiments that drove enterprise Strands selection.
- **Resource Guide:** Authored 85+ resource guide on agentic architecture, foundational research (ReAct, CoT, Tree of Thoughts), and evaluation methodology. Adopted as the team's onboarding standard for the agent-augmented transition.

EDUCATION

Master of Business Administration (MBA) — *Milwaukee School of Engineering*
Delta Mu Delta International Honor Society in Business, Pi Pi Chapter

Certificate, Advanced Business Strategy Using AI and Analytics — *Milwaukee School of Engineering*

B.S., Computer Science (Software Engineering, Architecture, Security) — *University of Illinois Springfield*

CORE COMPETENCIES

AI-Augmented Leadership:

- Agent-Augmented Operating Models
- Agentic AI Architecture & Deployment
- AI/ML Pipeline Design & MLOps
- Organizational AI Transformation
- Enterprise Data Platform Strategy
- Product Research Analytics
- Data Monetization
- M&A Data Integration
- Executive & CEO Stakeholder Management

Technical:

- Strands Agents SDK & Bedrock AgentCore
- LangChain/LangGraph · CrewAI
- OpenAI Agents SDK
- MCP
- RAG & Vector Search (Qdrant)
- Snowflake & Semantic Views
- dbt & MetricFlow
- Kafka, Schema Registry & CDC
- Medallion Architecture & Kimball Modeling
- Python, SQL, Node.js, .Net
- AWS (EKS, Lambda, Bedrock)
- Tableau

Domain:

- Healthcare SaaS
- EMR/EHR & Revenue Cycle Management
- HIPAA-Compliant Analytics
- Semantic Layer Architecture
- Metric Certification & Governance
- Multi-Agent Orchestration
- Data-as-a-Product
- AI/LLM Product Analytics
